My comments/suggestions

What were the strengths of the course that supported your learning?

- TA sessions were super helpful for completing assignments.
- The TP sessions in this course have been particularly effective in promoting my learning. The hands-on nature of the practical exercises with R provided a valuable opportunity to apply theoretical concepts in a real-world context. The structured approach to TP sessions, where each exercise builds upon the previous one, contributed to a cohesive learning experience. The guidance and feedback received during TP sessions have been instrumental in reinforcing my understanding and addressing any challenges encountered. Additionally, the incorporation of real-world scenarios in TP exercises has enhanced the practical relevance of the course material, making the learning experience both engaging and applicable.

What are the areas for improvement and your suggestions for achieving them?

- I want to express my sincere appreciation for the already enriching TP sessions. A special thank you to the professor for the quality of instruction and to this year's TP assistant, who is making every effort to explain the practical exercises in a detailed manner, deepening our understanding. These sessions have been invaluable in our learning journey, and I am grateful for the opportunity to benefit from your expertise and dedication. Thank you. In considering the strengths of the TP sessions, they have provided a solid foundation for our learning. However, as we look towards improvement, one suggestion is to incorporate group work during TP sessions. This collaborative approach could enhance students' ability to work in teams, fostering a more dynamic learning environment and better preparing us for the final project dedicated to the last evaluation.Furthermore, to ensure a smoother transition from TP sessions to the final project, providing a clear outline or presentation about the expectations for the final project would be beneficial. This could include examples of project structures or a demonstration of the type of project anticipated. Such guidance would offer a clearer understanding of the final evaluation criteria and help students better align their efforts throughout the course. These adjustments aim to enhance the overall effectiveness of the TP sessions and prepare us more comprehensively for the final evaluation.
- More sessions. In my opinion, one session before the assignment of each problem set is better. In some cases, I have no idea what I have to do and I need to search for information on the internet. The corrections are useful, but for me, if there were some practice sessions only with new exercises (not related to the assignment), it would be better. The correction of the assignment can be done only by uploading a file on Moodle.

  More solved exercises. If anyone wants to practice with other exercises, it is not possible.

- The schedule of TA sessions was disorganized. I understand that it's not always the professor's fault, but changing rooms at the last minute due to availability and postponing classes is not good. This comment is more for the university than for the TA professor. Please work on the organization of classes for students.
- The consistency of the rooms to be used in each session.
